

- **Holistic approach**, adequate education program for scientists, need for engineering design tools (not only LCA), social impacts, etc.
- **Low tech** vs. **High tech** - **appropriate** & **appropriable** technologies
- Technologies to **explore** and not ruin the world... the **danger of mass market applications** which serve the techno-liberal model (5G, 6G, IoT, AI, bitcoin, EV, etc.)
- **Rebound effects**, monitoring of innovation impacts after commercialization, continuous technology assessment
- **Share a vision** and a common pathway... be engaged!
