China, the European Union and Global Governance examines the key determinants of European and Chinese approaches to the restructuring of global governance systems.

Using a multidisciplinary method, this collection of chapters analyses four distinct fields that are key for both China and the EU and in the development of their relations and future cooperation: the global trading system, the international monetary system, climate and energy policy and international security. In the context of China's growing role in global governance and of EU-China cooperation, these contributions emphasize strategies, prospects and objectives of both actors. They outline possible avenues for an enhanced partnership in light of the changing global order, which implies a rethinking of the existing multilateral structures.

This interdisciplinary study will appeal to researchers and scholars interested in global governance, European foreign policy, Chinese foreign policy, EU-China relations, as well as trade, the international economy and climate change policies. Postgraduate students in international relations, international political economy, European studies and Chinese studies, as well as policymakers in the areas of external relations and EU-China relations, will also find much to interest them in this book.
