Abstract
We provide comprehensive insights into the peer review process and guide potential reviewers through the steps of reviewing scientific manuscripts. We discuss essential aspects such as the reviewer's responsibility in responding to invitations and maintaining confidentiality throughout the process, the criteria for accepting or rejecting papers, and efficient review of resubmissions. We emphasize the importance of prioritizing the review responsibility within other commitments, communication using professional and courteous language, and adherence to deadlines. We also offer practical tips on evaluating the abstract, introduction, materials and methods, results, and discussion section and summarizing the critiques in the review report. © 2023
