TABLE OF CONTENTS	1
FOREWORD	7
CHAPTER 1: A REVIEW OF THE LITERATURE.....	11
INTRODUCTION	11
1. CARDINAL AND ORDINAL NUMBER ASSIGNMENTS	15
1.1. <i>Cardinal and ordinal number assignments: the framework proposed by Wiese (2003)</i>	15
1.2. <i>Cardinal number assignments as a ‘gateway to number’</i>	20
1.2.1. Pre-verbal grasp of cardinality in infants	20
1.2.2. The acquisition of the counting sequence and its use in cardinal contexts.....	24
1.2.3. The counting principles and the development of non-iconic cardinality representations.....	28
1.2.4. Abstract cardinalities	31
1.3. <i>The development and acquisition of ordinal number assignments</i>	31
1.3.1. Grasp of serial order	31
1.3.2. Principles of ordinal assignments	34
1.4. <i>Cardinal and ordinal assignments: how do they relate?</i>	36
2. SIMILARITIES IN PROCESSING QUANTITY AND NUMERICAL ORDER.....	38
2.1. <i>Behavioural evidence</i>	38
2.1.1. The distance effect	38
2.1.2. The SNARC effect.....	40
2.1.3. May sequential order account for the distance and SNARC effects?	41
2.1.4. Models of the number line	43
2.2. <i>Neuroimaging evidence</i>	46
2.2.1. Quantity	47
2.2.2. Non-numerical order.....	48
2.2.3. Numerical order	50
2.3. <i>Neuropsychological evidence</i>	51
2.4. <i>Summary</i>	52
3. DIFFERENCES IN PROCESSING QUANTITY AND NUMERICAL ORDER	53
3.1. <i>Developmental evidence</i>	53
3.2. <i>Neuropsychological evidence</i>	60
3.3. <i>Behavioural evidence</i>	61
3.3.1. Serial position, pair-order and reverse distance effects in order judgments...62	
3.3.2. Comparing the number sequence and the alphabet.....	66
3.4. <i>Summary</i>	69
4. AIMS OF THE PRESENT THESIS	71
5. REFERENCES	74

DETAILED REPORT OF EMPIRICAL STUDIES83

**CHAPTER 2: WHEN KNOWING THAT 3 IS SMALLER THAN 5 DOESN'T
TELL YOU THAT 3 COMES BEFORE 5: A DISSOCIATION BETWEEN
CARDINAL MEANING AND SEQUENCE KNOWLEDGE AFTER PARIETAL
DAMAGE.....85**

INTRODUCTION85

CASE REPORT95

Neuropsychological investigation.....96

Language98

Finger agnosia99

Right-left discrimination101

EXPERIMENTAL INVESTIGATION OF NUMBER PROCESSING.....103

Section 1: Basic numerical abilities.....104

Test 1: Transcoding.....104

Test 2: Matching.....106

Test 3: Arithmetical facts106

Test 4: Exact numerical (encyclopaedic) knowledge109

Test 5: Parity judgment109

Summary of Section 1109

Section 2: Processing of numerical and non-numerical quantity109

A. Dot tasks109

Test 1: Comparison and seriation of dot patterns.110

Test 2: Cardinality judgments111

Test 3: Accessing cardinality through quantification procedures111

Comment for dot tasks112

B. Tasks with Arabic numerals and number words113

Test 1: Comparison tasks113

Test 2: Number positioning on an analogue scale115

Test 3: Give a number smaller/larger than the target.....115

Comment on tasks with Arabic numerals and number words.....115

C. Non-numerical quantity tasks116

Test 1: Size comparison116

Test 2: Comparison of quantity and frequency adverbs.117

Test 3 : Ferocity judgments117

Comment for non-numerical quantity tasks117

Summary of section 2117

Section 3: Sequence recitation and processing sequence relations118

A. Sequence recitation: Five levels underlying the elaboration of the sequence ...118

1. String level119

2. Unbreakable list level119

3. Breakable chain level120

4. Numerable chain level121

5. Bidirectional chain level.....	122
Comment on the elaboration of the sequence.....	122
B. Processing sequence relations	123
Test 1: Definition and understanding of the concepts “before” and “after”	124
Test 2: What comes Just After/ Just Before?	125
Test 3: Find the n th element in a sequence.....	127
Test 4: Order verification tasks	130
Comment about CO’s order processing abilities on ordered series.	132
C. Lexical and semantic knowledge about ordered series.....	133
Summary of Section 3.	134
<i>Section 4: Direct comparison of order relation processing in sequence and cardinal contexts.....</i>	<i>135</i>
Test 1: Computerized tasks	136
Numbers	136
Non-numerical ordered series.....	138
Test 2: Give an item smaller/larger or before/after the target.....	140
Numbers	140
Non numerical ordered series	142
Summary of Test 2.	145
Test 3: Give an item between two limits	146
Numbers	146
Non-numerical ordered series.....	148
Test 4: Select the smaller/larger or before/after element of the pair.....	149
Numbers	149
Non-numerical ordered series.....	151
Summary of Section 4.	152
<i>Section 5: The relationship with space</i>	<i>154</i>
Test 1: Oral and spatial before-after choice tasks	154
Test 2: “In front of” vs. “behind” relations.....	157
Test 3: “Above” vs. “Below” relations.....	157
Summary of Section 5	158
DISCUSSION.....	159
REFERENCES	171

CHAPTER 3: ELECTROPHYSIOLOGICAL EVIDENCE FOR DIFFERENTIAL PROCESSING OF NUMERICAL QUANTITY AND ORDER IN HUMANS..... 177

ABSTRACT	177
1. INTRODUCTION	177
2. METHODS	182
2.1. Subjects	182
2.2. Stimuli	182
2.3. Experimental tasks	183
2.4. Experimental procedure.....	184

2.5. ERP recording procedures.....	184
2.6. Data analyses.....	185
2.6.1. Behavioral data	185
2.6.2. ERP data	185
3. RESULTS	187
3.1. Behavioral results	187
3.2. ERPs results	189
3.2.1. First posterior positivity: P1 (80–120 ms)	189
3.2.2. First posterior negativity: N1 (130–170 ms).....	190
3.2.3. Second posterior positivity: P2p (170–210 and 210–240 ms)	192
3.2.4. Second fronto-central negativity: N2 (240–280 ms)	194
3.2.5. The late positive component	195
4. DISCUSSION	198
4.1. Behavioral results	198
4.2. Electrophysiological results.....	199
4.2.1. Differences in perceptual processing of two-digit numerals and letters.....	200
4.2.2. Semantic processing of numbers and letters and the distance effect.....	202
4.2.2.1. Left-lateralized parietal network for quantity processing.	203
4.2.2.2. Bilateral parietal network for order processing on numbers and letters.	205
4.2.2.3. Involvement of prefrontal regions in number and letter processing.....	207
4.2.3. Conclusion	208
ACKNOWLEDGEMENTS	209
REFERENCES.....	209

COMMENT ON THE ERP DATA AND THE BEHAVIOURAL EXPERIMENTS

217

CHAPTER 4: NUMERICAL ORDER AND QUANTITY PROCESSING IN NUMBER COMPARISON.....

ABSTRACT	221
1. INTRODUCTION	221
2. EXPERIMENT 1	224
2.1. Method	224
2.2. Results and discussion	225
3. EXPERIMENT 2	229
3.1. Method	229
3.2. Results and discussion	229
4. GENERAL DISCUSSION AND CONCLUSION.....	232
ACKNOWLEDGEMENTS	235
REFERENCES.....	236

APPENDIX	239
METHOD.....	240
RESULTS.....	241
DISCUSSION.....	245
ADDITIONAL REFERENCES	251
 GENERAL DISCUSSION	 253
1. SUMMARY OF EMPIRICAL DATA	254
2. WHAT DO OUR EMPIRICAL DATA TELL US ABOUT THE RELATIONSHIP BETWEEN NUMERICAL QUANTITY AND NUMERICAL ORDER?	256
2.1. <i>Separate or integrated mental representation(s) for quantity and order information?</i>	258
* Some evidence for separate representations	258
* Integrated Representation of quantity and order.....	260
2.2. <i>Distinct mechanisms underlying the processing of quantity and order information</i>	263
* The comparison process	265
* The serial search process	266
3. A TENTATIVE MODEL OF REPRESENTATION.....	268
4. CONCLUSION	274
<i>Some debated issues and the need for future research</i>	275
5. REFERENCES	276
