Author Keywords
Central nervous system; GNAQ; Melanocytoma; Next-generation sequencing

Index Keywords
Ki 67 antigen, melan A, protein S 100, transcription factor Sox10, GNAQ protein, human, guanine nucleotide binding protein alpha subunit; adult, brain stem, cancer epidemiology, cancer surgery, case report, central nervous system, cerebellum, clinical article, craniotomy, female, fluid-attenuated inversion recovery imaging, follow up, gene, gene mutation, gnaq gene, headache, high throughput sequencing, histopathology, human, human tissue, hypesthesia, imaging, immunohistochemistry, implantation, jugular foramen, Letter, macrophage, melanocytic tumor, meningeal melanocytoma, meningioma, mitosis rate, nuclear magnetic resonance imaging, posterior fossa, retrosigmoid craniotomy, T1 weighted imaging, tumor cell, young adult, diagnostic imaging, genetics, head, melanoma, meningeal tumor, mutation; Adult, GTP-Binding Protein alpha Subunits, Gq-G11, Head, Humans, Melanoma, Meningeal Neoplasms, Mutation
