

Table of contents

Chapter 1 : Introduction	1
Chapter 2 : Mathematical description	9
2.1. Governing equations	9
2.1.1. Saint-Venant – Exner	9
2.1.2. Two-layer model	15
2.2. Eigenstructure analysis	44
2.2.1. Eigenvalue analysis in pure hydrodynamic case	45
2.2.2. Saint-Venant – Exner	48
2.2.3. Two-layer model with assumptions on the velocity of the transport layer	55
2.2.4. Two-layer two-velocity model	61
Chapter 3 : Numerical resolution	69
3.1. Hyperbolic solver	70
3.1.1. Flux prediction HLL	72
3.1.2. Lateralised Flux, LHLL method	78
3.1.3. Intermediate eigenvalue, HLLC method	82
3.2. Source terms	86
3.2.1. Saint-Venant – Exner	86
3.2.2. Two-layer models	87
3.3. Merging of both hyperbolic and source terms resolutions	105
3.4. Second order accuracy	106

Chapter 4 : Boundary conditions	111
4.1. Eigenvalue analysis in pure hydrodynamic case	111
4.1.1. Downstream boundary conditions	112
4.1.2. Upstream boundary conditions	114
4.1.3. Critical flow	115
4.1.4. Summary	116
4.2. Saint-Venant – Exner	116
4.2.1. Downstream boundary conditions	117
4.2.2. Upstream boundary conditions	119
4.2.3. Critical flow	120
4.2.4. Summary	121
4.3. Two-layer model with assumption on velocity	121
4.3.1. Two-layer one-velocity model	121
4.3.2. Constant velocity ratio model	128
4.4. Two-layer two-velocity model	129
4.4.1. Downstream boundary conditions	130
4.4.2. Upstream boundary conditions	132
4.4.3. Critical flow	134
4.4.4. Summary	135
4.4.5. Effect of the sediment concentration in the transport layer	136
4.5. Flux calculation	138
4.6. Comparison and discussion	139
4.6.1. Example 1: lake level decrease	139
4.6.2. Example 2: bed aggradation	141
4.6.3. Synthesis	143
Chapter 5 : Experimental set up	145
5.1. The water re-circulation system	145
5.2. Upstream and downstream tank	146
5.3. The flume	146

5.4. The sediment supply	147
5.4.1. Sediments properties	147
5.4.2. Sediment feeder	148
5.5. Water and sediment level measurements	149
5.6. Acquisition device	151
5.7. Digital imagery	151
Chapter 6 : Two-layer model analysis in uniform flow	153
6.1. Introduction	153
6.2. Two-velocity model in uniform flow conditions	154
6.3. Friction coefficient calibration	155
6.4. Two-velocity model behaviour	160
6.5. Equivalent sediment equilibrium transport formula	167
6.6. Influence of concentration in sediment in the transport layer	169
6.7. Influence of the assumption concerning the velocity in the transport layer	172
6.7.1. One-velocity model	172
6.7.2. Two-velocity constant velocity ratio model	177
6.8. Preliminary experiments	179
6.9. Conclusions	180
Chapter 7 : Transcritical flow	183
7.1. Introduction	183
7.2. Knickpoint migration	183
7.2.1. Physical description	183
7.2.2. Numerical modelling	185
7.3. Hydraulic jump over mobile bed	211
7.3.1. Physical description	211
7.3.2. Numerical modelling	214
7.4. Conclusions	228

Chapter 8 : Scour hole	231
8.1. Introduction	231
8.2. Transition between a fixed and a mobile bed	232
8.2.1. Experiment	232
8.2.2. Experimental results	234
8.2.3. Numerical modelling	245
8.3. Scouring at the toe of a sill	254
8.3.1. Experiment	254
8.3.2. Numerical modelling	258
8.4. Conclusions	261
Conclusions	263
References	269
